PROFESSIONAL SUMMARY

Backend-focused full-stack developer specializing in designing scalable microservices and distributed systems. Built and deployed event-driven architectures using Kafka, RabbitMQ, and Redis to power real-time applications supporting 500+ concurrent users. Strong foundation in system design, cloud infrastructure (AWS), performance optimization, and building production-ready APIs.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React, Next.js, Tailwind CSS, WebSocket

Backend: Node.js, Express.js, REST APIs, Microservices, RabbitMQ, Redis

Databases: MongoDB, PostgreSQL

Cloud & DevOps: AWS (EC2, S3, RDS, IAM), Docker, Linux

System Design: Distributed Systems, Caching, Rate Limiting, API Design, SOLID Principles, OOP

Tools: Git, GitHub, Postman, Vercel

TECHNICAL PROJECTS

Real-Time Chat Application (Microservices)

Dec 2025 – Jan 2026

Node.js, RabbitMQ, Redis, WebSocket, MongoDB, TypeScript

[GitHub](#) | [Live](#)

- Architected distributed microservices with RabbitMQ (including dead-letter queues) ensuring reliable event-driven communication across services, with RabbitMQ containerized via Docker for consistent and portable service deployment.
- Engineered WebSocket-based messaging system supporting 500+ concurrent users with Redis caching and rate limiting.
- Reduced server load by 40% via MongoDB query optimization, collection indexing, and connection pooling strategies.

URL Shortener

Feb 2026 – Mar 2026

Next.js, TypeScript, Node.js, Express.js, PostgreSQL, Redis

[GitHub](#) | [Live](#)

- Implemented URL shortening engine using Redis atomic INCR for collision-free ID generation combined with a Base62 encoding algorithm, replicating the core architecture used by production-grade link shorteners.
- Designed MVC-style backend with a Repository pattern using raw PostgreSQL queries, eliminating ORM overhead and improving query performance.
- Secured the API with JWT authentication, bcrypt password hashing, Helmet HTTP headers, and express-rate-limit middleware to prevent abuse at scale.

AI Resume Builder

Oct 2025 – Nov 2025

Next.js, TypeScript, Gemini API, ImageKit CDN, MongoDB

[GitHub](#) | [Live](#)

- Developed AI-powered resume generator integrating Gemini API to produce ATS-optimized structured content with real-time preview.
- Implemented ImageKit CDN for asset delivery, reducing image load times by 60% and improving overall application performance.

QuickShow – Movie Discovery App

Jun 2025 – Jul 2025

React, Express.js, TMDB API, MongoDB

[GitHub](#) | [Live](#)

- Built a full-stack movie discovery platform integrating TMDB API, featuring real-time search, detailed movie pages, and a persistent Favorites and Watch Later system.
- Persisted user-curated movie data to MongoDB, enabling cross-session retrieval of saved titles with an optimized query structure for fast lookups.

EDUCATION

G. Pullaiah College of Engineering & Technology

B.Tech in Computer Science and Engineering (AI)

Expected May 2027

CGPA: 8.72 / 10.0

CERTIFICATIONS

AWS Cloud Practitioner Essentials – AWS Training & Certification

Dec 2025

Supervised Machine Learning: Regression and Classification – Coursera

Jan 2025
